MIXING OF BIO-TAC ADHESIVE AND NOMATE PRODUCTS

Just prior to field application, mix only the amount of BIO-TAC adhesive and NoMate products to be used.

IMPORTANT NOTES

BIO-TAC adhesive is used to hold NoMate products on plant foliage. See recommendations for the amounts to use, and mixing instructions. Addition of a liquid insecticide to BIO-TAC adhesive as part of a tank mix and/or high air temperature will reduce viscosity; changes in the calibration of aerial application equipment may be necessary. Consult the aerial application equipment service manual for calibration information. Contact your supplier or a representative of Scentry Biologicals for additional information.
